In the caption for Fig. 5, the phrase “... other parameters are as follows: $b_1 = 350$ nm, $b_2 = 5$ nm, and $d = 150$ nm” should be replaced with “... other parameters are as follows: $b_1 = 350$ nm, $b_2 = 50$ nm, and $d = 150$ nm”. The figure itself remains unchanged; all calculations were performed with $b_2 = 50$ nm. This misprint was overlooked during the proofing process. The correct value of b_2 reflects the importance of a skin-effect in the system, which is taken into account in the $f(\Delta)$ function.
